

## SCDi + 100 $\mu$ M OA (Rescue)

## E Summary: OA Rescue of SCDi Phenotype

Parameter	SCDi (Baseline)	SCDi + OA (Rescue)	Effect
Mobile Fraction (%)	54.5	55.6	No change
Half-time $t_{1/2}$ (s)	1.306	0.601	<b>2.2x faster</b>
Time Constant $\tau$ (s)	1.884	0.867	<b>Rescued</b>
$R^2$	0.9962	0.9998	-

## F

### Biological Interpretation:

SCDi inhibits Stearyl-CoA Desaturase (SCD), blocking endogenous oleic acid synthesis.

Baseline (SCDi alone):  
 → Depleted oleic acid  
 → Slower molecular dynamics ( $t_{1/2} = 1.31\text{s}$ )

Rescue (SCDi + exogenous OA):  
 → Oleic acid restored exogenously  
 → Faster dynamics rescued ( $t_{1/2} = 0.60\text{s}$ )

**Conclusion:**  
 The slower dynamics in SCDi-treated cells are specifically due to oleic acid depletion, as adding exogenous OA reverses the phenotype.
